

IMPORTANT: This syllabus form should be submitted to OAA (gsbs_academic_affairs@uth.tmc.edu) a week before the start of each semester.

NOTE to STUDENTS: If you need any accommodations related to attending/enrolling in this course, please contact one of the Graduate School's 504 Coordinators, Cheryl Spitzengerger or Natalie Sirisaengtaksin. We ask that you notify GSBS in advance (preferably at least 3 days before the start of the semester) so we can make appropriate arrangements.

Course Description:

In this newly created nanocourse, emphasis is on clinical aspects in cancer and how research in general can accelerate, contribute to answer clinical questions in this field. Therefore, many of our speakers are clinicians, or have a strong clinical background, e.g. in pathology, surgery, therapy modalities, or clinical trials.

Course Objective/s:

Nanocourse Syllabus: Clinical perspective for a basic scientist

This course is covering a wide range of clinical and clinical research related topics.

Epidemiology/Prevention: Students will be introduced to basic genetic epidemiology principles and discuss molecular epidemiologic approaches including GWAS studies. A physician will discuss the concept and practice of cancer prevention including dietary recommendation, medication, vaccination, and screening.

Clinical Trial/Biostatistics: Students will be taught about cancer-specific trials and how prospective and interventional designs are used to maximize yield in Phase 1, 2 and 3 trials. Students will learn about clinical trial protocols, key components of the protocol include detailed background of the disease and type of intervention, primary and secondary objectives, inclusion and exclusion criteria, drug description including dose

Multiomics/patient samples: Lectures for this topic will cover how multiomic approaches will be used to understand molecular alterations in patient derived samples including tumor samples, blood and other bodily fluids and how this information will be used to influence diagnostic and treatment decisions.

Animal Models and Co-clinical trials: Students will be taught various mouse models used in cancer research. The concept of patient-derived xenografts and genetically engineered mouse models will be reviewed and their applications in co-clinical trials and how this helps in stratification of patient populations that will likely respond to therapy will be explained.

Surgery: A surgeon will discuss e.g. basic knowledge of surgery, feasibility and limitations that might occur or what surgical results can be expected. What tumors what extent of tumor can be operated and where are limitations to surgical interventions.

Pathology: This lecture will focus on basis of pathology and the practical application of pathology in basic science, translational and clinical research. The topics addressed in the lecture include types of tissue samples and optimal collection techniques, processing of tissue samples and review of procedures, basics of histopathologic interpretation of samples, and advances in molecular pathology with respect to individualized cancer therapies.

Radiation and Chemotherapy: This lecture will review the concepts relating to the effects of radiation on normal tissues and effects on malignant cells and helps students to understand the role and use of combination modalities, such as chemotherapy and radiation in oncology. Various types of therapies including chemotherapy, molecular targets, and immunotherapy will be reviewed. The lecture also includes some information regarding how toxicity of cancer treatment can be minimized using proton therapy, especially in pediatrics.

Biomarkers: A researcher will introduce basis of molecular biomarkers, molecular profiling technologies, and their clinical applications, including risk assessment, early detection, and prediction of therapeutic responses, monitoring, and determination of prognosis.

Survivorship: This lecture describes the development of the Cancer Survivorship Program at MD Anderson, focusing on the development of guidelines to guide clinical practice, education modules to provide guidance to community physicians on the care of survivors and research seed-funding resources to provide preliminary data to help fund trials that describe the management of this highly misunderstood population. Additionally, a survivor will talk about her/his journey through cancer.

Exam: A multiple choice questions based test will be offered on the last day of the course and students will graded using the pass/fail system.

Learning objectives:

- 1) To understand the process of implementing laboratory research results in the clinic.
- 2) To understand how cancers are “basketed” to specific therapies in the clinic.
- 3) To understand how new cancer therapies are assessed for efficacy and safety.
- 4) To gain insight into how clinical practice is organized.

Student Responsibilities and Expectations: Students enrolled in this course will be expected to attend each course, and prepare for and take a final examination based on lectures.	
Grading System: Pass/Fail	
Student Assessment and Grading Criteria : <i>(May include the following:)</i>	
Percentage	Description
Final Exam (50%)	
Participation and/or Attendance (50 %)	

CLASS SCHEDULE - Summer 2024

Date	Duration (Hour(s) taught by lecturer)	Lecture Topic	Lecturer/s
Monday, June 10	1 hour	Clinical Trials	Dr. Rodabe N. Amaria
Tuesday, June 11	1 hour	Chemotherapy and other systemic therapies	Dr. Ecaterina Dumbrava
Wednesday, June 12	1 hour	Epidemiology/prevention	Dr. Edwin J. Ostrin
Thursday, June 13	1 hour	Radiation Oncology	Dr. Ahsan Farooqi
Friday, June 14	1 hour	Animal Models & CO-Clinical Trials	Dr. Larry Kwong
Monday, June 17	1 hour	Surgery	Dr. Chiba Ene
Tuesday, June 18	1 hour	Pathology	Dr. Priyadharsini Nagarajan
Wednesday, June 19	1 hour	Multiomics	Dr. Larry Kwong
Thursday, June 20	1 hour	Survivorship	Dr. Alma Rodriguez
Friday, June 21	2 hour	Final Test	Dr. Wantong Yao
